

IMO has been developing, producing, and marketing ball and roller slewing rings, as well as gear rims in diameters from 100 mm to more than 6,000 mm in a variety of designs for more than 20 years.

For example these products are used in the following applications:

Construction machinery, crane and lifting technology, tunnel boring technology, ship building, medical technology, bulk handling. As a supplier to bottling plants, IMO serves the leading manufacturers in the industry.

Slewing rings from IMO have a sealed raceway system and can be supplied with inner or outer toothing. Slewing rings can be combined with pinions, planetary gears, and/or motors.

IMO Momentenlager is accustomed to unusual tasks.
